

# Stormwater Floods Web Application Style Guide

**The Baldwin Group, Inc.**

Project Coordinator: Melissa Ladd

Designer: Keith Forsythe

Developer: Josh Crozier

QA: Nikolay Atanasov

# Colors

---

## Primary

## Secondary

### **Color Guidance**

Primary color pallet is established at the NOAA federal level and is unchangeable. Secondary pallet is built using earth tones that feature a lowered hue value. The primary audience for Stormwater Floods is a City Planner that views technical drawings and blueprints in their daily job responsibilities. Using colors that are similar to those found in technical drawings and blueprints will create a sense of familiarity and trust for a City Planner as they interact with the application.

## Icon Style

---

### Icon Guidance

Icons should be simple and accessible. Each icon should convey its meaning within a single user glance. Too much complexity in an icon can distract the user and distract from the icon's meaning.

- Simple shapes that can be drawn in the sand and retain meaning.
- Clean lines with no overlap.
- One color presentation with hover state, focus state, and active state.

# Illustratons and Interactive Content

Illustrations should work to create a visual language that feels familiar to the target user. Most of our users, because they are planners or civic engineers, should be familiar with technical drawings or city blueprints. Therefore, our illustrations should borrow the clean lines of these technical diagrams, and describe the core idea in simple visual terms.

If there is an interactive element with transitional animations, that element should be featured in color with the other elements remaining as line art. This clearly directs the user to the concept being described.
